

PROJECT 02: OSINT INVESTIGATION REPORT

Project: OSINT-02

Target: chicken-road2.app

Date: 28th July 2026

Author: Gnanapragasam Kishalan

Intern ID: CA0277

1. Executive Summary

The Comprehensive Open Source Intelligence (OSINT) investigation was conducted against chicken-road2.app. The target is gambling/game platform operating on “Chicken Road 2” brand.

The Key Findings of this is The domain was registered with Key-Systems GmbH (Germany) and Hosted on Cloudflare/Vercel in the US. While the site utilizes modern security (SSL,HSTS) and received a **96/100 trust score** from ScamAdviser, Critical transparency gaps exist. The registrant contact is hidden behind the privacy proxy in the UK, and the site activity blocks AI Scrapers (ChatGPT-User) in its robots.txt. The lack of a visible gambling license remains the highest regulatory risk.

2. Target Overview

- **URL** : <https://www.chicken-road2.app/>
- **Business Model**: Online casino-style game (“mine game”) where users bet real money.
- **Core Technology**: Built on Next.js (React) and hosted via **Vercel** , Protected by **Cloudflare**.
- **SSL Status**: Valid DV (Domain Validation) certificate issued by Google Trust Services (expires Oct 3 , 2026)

3. Detailed Intelligence Findings

4. Sources & References

- ScamAdviser (Trust Score)
- ViewDNS.info (DNS Records)
- Who.is (Register Info)
- BuiltWith (Technology Stack)
- Webchart.Org (Traffic/Overview)
- Direct Browser Access (robots.txt & SSL Certificate)

5. Professional Security Observations

OBSERVATION 1: AI Scraping is Blocked

- **Findings:** The `robots.txt` explicitly blocks **ChatGPT-User** and **SemrushBot**
- **Impact:** This suggests the owners do not want their website content used to train Large Language Models (LLMs) or index by SEO competitors. This is a deliberate privacy/security posture.

OBSERVATION 2: High Trust Score vs. Hidden Identity

- **Finding:** ScamAdviser gives 96/100, but the WHOIS data routes to a privacy proxy in the UK.
- **Impact:** While technically secure, the lack of a verifiable company entity means users cannot easily sue or identify the operators if funds are lost.

OBSERVATION 3: DV SSL Only

- **Finding:** The SSL certificate shows “**Not Part Of Certificate**” under “**Organization**”.
- **Impact:** This proves the site is not a verified legal business entity. Financial platforms usually require OV (Organization Validation) certificates.

OBSERVATION 4: Blocking of Internal Paths

- **Finding:** The `robots.txt` hides `/api/*` and `/go/*`.
- **Impact:** This hides their internal betting algorithms and redirect paths from search engines, which is standard practice to prevent reverse-engineering of their game logic.

6. Recommendations

- **For Users:** Despite the 96/100 score, treat this as a high-risk gambling site. Verify if they hold a UKGC (UK Gambling Commission) or MGA license before depositing.
- **For the Company:** Upgrade to an Extended Validation (EV) SSL certificate to display the company name in the browser bar and increase user trust.
- **For Future OSINT:** Monitor the `sitemap.xml` periodically (currently empty/non-functional) to see if they expand their hidden pages.
